

## Publication of 'gray literature' in EJOI

This special issue contains the abstracts of the XXIV International SIO congress, "A multidisciplinary approach to optimise aesthetics of the face in implant-supported prostheses", which was held in Milan, Italy, on the 5th and 6th February 2016.

Special issues are made and distributed as a bonus for our readers. The abstracts are peer-reviewed by the conference organisers and not by the editorial board of EJOI. The results of abstracts can be interpreted differently, depending on people's perspectives and circumstances. Please consider the conclusions presented carefully. They are the opinions of the abstract authors, and are not necessarily shared by EJOI.

Conference abstracts provide an insight on what are the current trends in research. By publishing

abstracts in a regular scientific journal, researchers will find it more easy to identify the so-called 'gray literature', meaning preliminary reports of new unpublished studies that may be used in systematic reviews. Readers can also be inspired by new ideas which otherwise might not have a wide distribution. Gray literature is generally defined as academic literature that is not formally published.

It may nonetheless be an important source of information for researchers, because it tends to be original and recent.

I would like to thank all contributors of the present supplement for their efforts.

Happy reading!  
Marco Esposito
