## Book information

**Authors:** Vicente Jiménez-López  
**Title:** Occlusal Adjustments in Implants and Natural Dentition: 3D Occlusion  
**Subtitle:** TMJ pathology related to occlusion: etiopathology and treatment

#### Short text:

This book provides a meticulous analysis of occlusion and the many anatomical factors involved: natural teeth and implants, gingiva, tooth- and implant-borne prostheses, masticatory muscles, ligaments, the TMJs, and articular capsules and disks, among others. Furthermore, the problems that can lead to malocclusion often relate to additional patient factors, emotional stress, bruxism, clenching, and the jaw being out of proper position. The book also covers referred pain, which can mimic joint symptoms caused by neck and masticatory muscle problems, as well as headaches and facial pain that may be connected to occlusion-related muscle problems including the neck muscles. The accompanying DVD includes more than 200 clinical animations.

#### Contents

Chapter 01. Work Philosophy  
Chapter 02. Occlusion-Related Terminology  
Chapter 03. Organic Occlusion and Basic Principles  
Chapter 04. Anterior Guidance  
Chapter 05. Centric Relation  
Chapter 06. Bilateral Posterior Occlusal Stability  
Chapter 07. Vertical Dimension  
Chapter 08. Etiopathology of Occlusal Problems: Prematurities and Interferences  
Chapter 09. Occlusal Etiology of TMJ Pathology  
Chapter 10. Splint Therapy  
Chapter 11. Occlusal Adjustment  
Chapter 12. Occlusion in Implant-Supported Fixed Dental Prostheses and Single Units
