Buch-Information

Hrsg.: Francischone, Carlos E.
Titel: Osseointegration and Multidisciplinary Treatment
Kurztext:

The functional consequences of tooth loss require clinicians to fabricate restorations that take into consideration individual anatomic situations as well as the psychological aspects of the patients. This comprehensive text details the role of osseointegration in prosthodontic restoration via careful treatment planning and the use of a multidisciplinary therapeutic approach. Open communication between the patient and treatment team ensures that every stage of treatment is in concert with the patient's desires. From detailed clinical and radiographic examination to soft tissue considerations to selection of implant systems and surgical techniques, this book outlines well-documented modalities that are safe, simple, and predictable.

Contents

- Chapter 01. Introduction
- Chapter 02. Provisional/Transitional Restorations in Osseointegration
- Chapter 03. Can Different Implant Systems Influence the Quality of Peri-implant Oral Microflora?
- Chapter 04. Soft Tissue Management and Smile Esthetics
- Chapter 05. When to Replace Teeth by Implants
- Chapter 06. Treatment Planning and Procedures to Adequate Implant Positioning Toward Esthetics and Function
- Chapter 07. The Use of Intraoral Donor Sites on Alveolar Osseous Reconstruction
- Chapter 08. Loading or Immediate Function on Osseointegrated Implants
- Chapter 09. Autogenous Bone Grafts on Implantology
- Chapter 10. Fundamentals of Zygomatic Implants as a Surgical Alternative in the Treatment of Atrophic Maxillae
- Chapter 11. Soft Tissue Management on Implantology
- Chapter 12. Reconstruction of Craniofacial Function Using Osseointegrated Implants in Patients with Mandibular Defects
- Chapter 13. Oral Fixed Rehabilitation of Atrophic Jaws
- Chapter 14. Surgical Techniques for Zygomatic Implant Placement in Atrophied Maxillary Arches
- Chapter 15. Francischone's Classification for Implant Prostheses
