## **Book information**

Authors: Enrico Agliardi / Davide Romeo

Title: Tilted Implants

Subtitle: Implant-Prosthetic Rehabilitation of the Atrophic Patient

**Short text:** 

When presented with atrophic arches, clinicians often turn to invasive techniques such as bone grafting or maxillary sinus augmentation. However, using tilted implants instead can avoid these aggressive procedures, allowing the implant support to be moved posteriorly and for longer implants to be chosen. The implants can be loaded immediately to support a full-arch fixed prosthesis in multiple configurations, such as All-on-4, transsinus implants, zygomatic implants, or the authors' signature V-II-V technique. This book first presents the science and clinical evidence behind the various protocols using tilted implants, then proceeds to discuss patient evaluation, diagnostics, and planning before diving into the methods themselves. Procedures are discussed separately for each arch, highlighted by dozens of clinical cases representing a diverse range of initial situations. In addition to the surgical protocols, methods for fabricating provisional and definitive prostheses are laid out with each step illustrated and explained. This comprehensive volume truly covers everything a clinician needs to know to use tilted implants with great success for their patients.

## **Contents**

Chapter 01. The Biology of Osseointegration

Chapter 02. Osseointegration in Immediate Loading Chapter 03. Immediate Loading with Tilted Implants Chapter 04. Advantages of Tilting Dental Implants Chapter 05. Evaluation of Edentulous Patients

Chapter 06. Diagnostics and Planning for Complex Rehabilitation

Chapter 07. Rehabilitation of the Compromised Patient Chapter 08. Rehabilitation Protocols for the Maxilla Chapter 09. Rehabilitation Protocols for the Mandible

Chapter 10. Provisional Prosthetic Solutions Chapter 11. Definitive Prosthetic Solutions
