## Buch-Information

**Autoren:** Romeo Pascetta / Davide Dainese  
**Titel:** Atlas of Dental Rehabilitation Techniques  
**Kurztext:**

Laboratory procedures require absolute precision to ensure that the appropriate anatomical information is preserved through each stage of fabrication. This laboratory manual defines the key elements that dental technicians should understand to succeed in their work. The authors illustrate the working techniques necessary to create esthetic and functional dental prostheses that reproduce the look of natural teeth. In addition, they detail the technology, materials, and equipment used in their laboratory. In documenting their everyday work routine, the authors underscore the significance of accurate planning, precision work, and clinical and laboratory communication and reveal the steps of the fabrication process for different kinds of restorations. Intended as an accessible and quick-to-consult volume, this exceptional book provides the reader with useful details to address many techniques, from the unexpected challenges for some single-tooth restorations to the complexity of large rehabilitations that present additional difficulties. The talented ceramist authors of this book have distilled their practical experience into the essential techniques, the keys to material selection, and the use of emerging technologies that can guarantee successful prosthetic restoration and patient satisfaction.

#### Contents

Chapter 1. Clinical-Laboratory Communication  
Chapter 2. Single-Tooth Restorations  
Chapter 3. Fixed Partial Dentures  
Chapter 4. Implant-Supported Restorations  
Chapter 5. Full-Mouth Restorations  
Chapter 6. All-Ceramic Restorations  
Chapter 7. CAD/CAM Restorations

**Fachgebiet(e):** Prothetik, Zahntechnik
