## Book information

**Authors:** Michael Hülsmann / Edgar Schäfer

**Title:** Probleme in der Endodontie

**Subtitle:** Prävention, Identifikation und Management

**Short text:**

Root canal treatment not infrequently presents the dentist with seemingly insurmountable biologic, anatomical, technical, and instrumental problems. The identification and successful management of such difficulties are the focus of this compendium. In a uniform systematic approach, the characteristics and background of each problem are presented, possibilities for prevention are discussed, and approaches to solving the problem are offered, critically evaluated, and substantiated by scientific findings using the most important literature citations in each case. These solution approaches are explained in an exemplary manner in interspersed case presentations, contributed by numerous colleagues from university and practice. The problems and proposed solutions are presented in a comprehensive and comprehensible manner in over 1,200 illustrations. Each chapter concludes with a concise list of relevant literature. An index and a list of materials round off the book.

**Categories:** Endodontics, General Dentistry, Student literature
