## Book information

**Authors:** Jordi Manauta / Anna Salat

**Title:** Layers: An Atlas of Composite Resin Stratification

**Short text:**

Despite the many advances of contemporary dental research in biomaterials and tissue regeneration, no dental material can perfectly correspond to natural tooth. The authors of this dynamic atlas posit that it is the mastery of layering technique and not the material itself that is most important in recreating natural-looking restorations.

This reference book uses over a thousand images to explore the stratification of natural tooth and demonstrate solutions for how to arrange layers of composite resin to recreate the color, opacity, shape, and surface abnormalities of natural tooth. The authors provide step-by-step instruction in basic layering techniques as well as in advanced applications of dental characteristics, which are possible with a wide range of esthetic dental materials. In addition, each chapter is prefaced with insights from luminaries in esthetic dentistry, including *Luiz Narciso Baratieri*, *Galip Gürel*, *Pascal Magne*, *Francesco Mangani*, *Ricardo Mitrani*, and *Angelo Putignano*, among others.

Optimal stratification techniques not only create natural-looking beauty in restorations but also imitate the innate bioarchitecture of teeth, which is the foundation of functional and esthetic results.

**Contents**

- Chapter 01. Color
- Chapter 02. In
- Chapter 03. Out
- Chapter 04. Mid
- Chapter 05. Classification
- Chapter 06. Palatal Features
- Chapter 07. Posterior Teeth
- Chapter 08. Physiologic Phenomena
- Chapter 09. Pathologic Phenomena
- Chapter 10. Surface and Polishing
- Chapter 11. Red Esthetics
- Chapter 12. Analysis
- Chapter 13. End

**Categories:** Esthetic Dentistry, Restorative Dentistry
