Titel: Practical Applications in Dental Occlusion

Untertitel: Analog to Digital

Kurztext:

Occlusion is often boiled down to the “tap, tap, and grind” of articulating paper marks dentists perform daily. And for 90% of appointments, occlusion can be largely ignored until it’s time to get out the articulating paper at the end of the appointment. Tap, tap, and grind. Drill the red marks. However, sometimes the patient’s current bite won’t allow the necessary treatment, and a new occlusion must be built and transferred to the lab. But how? Should the patient determine the maxillomandibular position (ie, show where they feel comfortable), or should scientific principles be applied to find the physiologic maxillomandibular relationship? How do you capture the new occlusion for the lab? That’s where this book comes in—to teach you a simplified concept of occlusion that can help you perform predictable and successful treatment. The book is divided into two parts: Part 1 outlines guiding principles and a simplified model of occlusion, and Part 2 features specific situations you will come across as you diagnose, treatment plan, and treat your patients’ cases.

Author Michael Radu breaks everything down and offers explanatory analogies to help you conceptualize the principles of occlusion in a way you can understand and apply to daily practice for the benefit of your patients’ cases.

Contents

Chapter 01. Why Do We Need Occlusion?
 Chapter 02. Practical Principles of Occlusion
 Chapter 03. The Occlusion Formula
 Chapter 04. There Are Only Two Bites
 Chapter 05. Clinical Techniques and Principles of Interocclusal Registrations
 Chapter 06. Techniques for Examination and Treatment Planning
 Chapter 07. Techniques for Interocclusal Registration of an Existing Occlusion
 Chapter 08. Techniques for Interocclusal Registration for a New Occlusion
 Chapter 09. Techniques for Equilibration of the Occlusion
 Chapter 10. Techniques for Recording the Envelope of Function
 Chapter 11. Techniques for Communicating with the Laboratory
 Chapter 12. Analog Versus Digital Techniques for Interocclusal Registration
