Erschienen:	Oktober 2024

Buch-Information

Autoren: José Carlos Martins da Rosa
Titel: Immediate Dentoalveolar Restoration
Untertitel: Immediately Loaded Implants in Compromised Sockets
Kurztext:
Single-tooth replacement in the esthetic zone is one of the most common indications for dental implant placement. Immediate dentoalveolar restoration (IDR) is a technique established to broaden indications for immediate loading on individual teeth with compromised hard or soft tissue architecture. With this protocol, lost tissue is reconstructed in the same surgical session as implant placement and provisional crown delivery, reducing the number of interventions and promoting better esthetics with greater predictability. This book provides a step-by-step explanation of the protocols for IDR, featuring minimally invasive and flapless procedures, use of the maxillary tuberosity for graft harvesting, immediate loading, and correct crown contouring for an adequate emergence profile. A number of clinical cases of different complexity are demonstrated to highlight the versatility of this technique and the excellent possible outcomes.

Contents

- Chapter 1. Esthetics in Implantology and the Postextraction Socket
- Chapter 2. Immediate Provisionalization in Intact Sockets
- Chapter 3. Emergence Profile Design for Implant-Supported Prostheses
- Chapter 4. Compromised Sockets
- Chapter 5. The Maxillary Tuberosity as a Donor Site
- Chapter 6. The Immediate Dentoalveolar Restoration Protocol
- Chapter 7. Immediate Dentoalveolar Restoration: Case Reports
- Chapter 8. Digital Workflow for IDR
