## Buch-Information

**Autoren:** Katrin Bekes  
**Titel:** Molar Incisor Hypomineralization  
**Kurztext:**

Molar incisor hypomineralization (MIH) has become a much-discussed topic of interest that presents major challenges for dental professionals in practice and research. It is defined as a qualitative enamel defect that typically occurs on one or more first permanent molars with or without the involvement of the permanent incisors. This book serves as a comprehensive reference that critically appraises the controversies around MIH found in the scientific literature. Practical advice about diagnosis and treatment of the disease is provided, and the various clinical treatment options are explained in detail. The text is written for dental practitioners, postgraduate and undergraduate students and researchers, as well as anyone who would like to expand their knowledge of this contemporary topic in everyday clinical dentistry.

#### Contents

Chapter 01. Introduction  
Chapter 02. Clinical presentation and morphological features  
Chapter 03. Structural properties of hypomineralized enamel  
Chapter 04. Prevalence  
Chapter 05. Etiology  
Chapter 06. Diagnostics and classification options  
Chapter 07. Differential diagnoses  
Chapter 08. Therapy concepts  
Chapter 09. Pain management  
Chapter 10. Prophylaxis and desensitization  
Chapter 11. Fissure sealing  
Chapter 12. Direct restorations  
Chapter 13. Indirect restorations  
Chapter 14. Extraction  
Chapter 15. Treatment options for hypomineralized incisors  
Chapter 16. MIH and caries  
Chapter 17. Hypomineralized primary molars

**Fachgebiet(e):** Zahnheilkunde allgemein, Kinderzahnheilkunde, Literatur fürs Studium
