Buch-Information

Autoren: Frans P. G. M. van der Linden

Titel: Development of the Human Dentition

Kurztext:

For almost three decades, Prof van der Linden's classic text, *Development of the Dentition*, has been the international standard reference in its field. Now, he has updated those concepts in a new edition. Starting with tooth formation and the development of the deciduous dentition, the author systematically takes the reader through the transition to the permanent dentition and through the aging of the dentition. Emphasis is placed on the relationships among the development of the dentition, the growth of the face, and funcational factors. Subsequently, the development of orthodontic malocclusions is presented, followed by the effects of untimely loss of deciduous teeth.

Contents

Chapter 01. Formation of Teeth

Chapter 02. Jaw Growth During Formation and Eruption of Deciduous Teeth

Chapter 03. The First Transitional Period: Transition of Incisors and Emergence of First

Permanent Molars

Chapter 04. Intertransitional Period

Chapter 05. The Second Transitional Period: Transition of Canines and Deciduous

Molars/Premolars and Emergence of Second Permanent Molars

Chapter 06. Changes in the Molar Region

Chapter 07. The Adult Dentition

Chapter 08. General Aspects of the Development of the Dentition

Chapter 09. Growth and Development of the Facial Complex: Interactions Among the

Dentition, Skeleton, and Function

Chapter 10. Abnormalities of the Dental Arches

Chapter 11. Class II, Division 1 Malocclusions

Chapter 12. Class II, Division 2 Malocclusions

Chapter 13. Class III Malocclusions

Chapter 14. Open Bites and Nonocclusions

Chapter 15. Asymmetries, Transverse Deviations, and Forced Bites

Chapter 16. Premature Loss of Deciduous Teeth

Chapter 17. Statistical Data
