Información sobre el libro

Editor: Sattler, Gerhard
Título: Illustrated Atlas of Esthetic Mesotherapy
Subtítulo: Active Substances | Dosage | Administration
Serie: Aesthetic Methods for Skin Rejuvenation
Texto breve:

Mesotherapy is a simple and effective method of esthetic treatment involving targeted microinjections of medicinal substances into the skin and connective tissues. This atlas offers an essential introduction to the practice of esthetic mesotherapy and arms clinicians with what they need to know to get started, such as descriptions of the active substances, injection techniques, side effects, and effective methods for consultation and case documentation. Treatment sequencing is detailed for the most common therapeutic applications, including skin rejuvenation (mesolift), preventive skin toning (mesoglow), treatment combined with injections of botulinum toxin (mesobotox), hair loss treatment (mesohair), cellulite treatment, treatment of local fat pads (lypolysis), and other dermatological indications. The clinical illustrations provide detailed step-by-step instruction, and the inclusion of case histories confirms the benefits and efficacy of this esthetic therapy.

Contents

Chapter 01. Definition of Mesotherapy
Chapter 02. The Active Substances
Chapter 03. Documentation and Organization
Chapter 04. Side Effects
Chapter 05. Materials and Techniques
Chapter 06. The Consultation
Chapter 07. The Treatment
Chapter 08. Regional Treatments
Chapter 09. Case Histories
Chapter 10. Aids for Therapist

Categorías: Dermatología
